

Do you have Parkinson's disease (PD), with or without memory problems?

Researchers from Dr. Oury Monchi's Healthy Brain Aging Lab at the University of Calgary need your help! You may be eligible to participate if you are **60 years of age or older**. We want to better understand the development of thinking and memory problems in Parkinson's disease and general aging.

This 3 year research study involves:

- Study visits at 3 time points: baseline, 1.5 years, and 3 years
- A *total* of 8 in-person study visits over the 3 time points
- Assessment of your mood, memory, and thinking
- MRI scans of your brain
- Blood draw at every time point (a total of 3 blood draws)
- Assessment of motor symptoms of PD

The study visits will happen at the Foothills Hospital Campus. We will reimburse you at each study visit to cover any possible transportation, parking, and food expenses.

Do you have more questions? Do you want to participate?

Please phone our research coordinator **Nadia Maarouf** at **403-210-8519**, or send an email to **info@pcanlab.ca**
