Deciphering the effects of environmental factors in tic disorders: the long and winding road

Presented by: Dr. Davide Martino, PhD, MD

Monday, December 9th, 2019
Auditorium, 4th floor ACH
8:30 am – 9:30 am

Dr. Davide Martino is an associate professor and director of the Movement Disorders Program at the Hotchkiss Brain Institute at the University of Calgary. His multidisciplinary research program is focused on the identification of endophenotypic markers for the subtyping of complex movement disorders, primarily dystonia, tic disorders and Parkinson’s disease. He is also interested in the effect of specific environmental factors on pathomechanisms and clinical expression of complex movement disorders, with a special focus on the microbiota-gut-brain axis and infectious pathogens. Dr. Martino lectures at international conferences of neurological societies including the Movement Disorders Society, the American Academy of Neurology and the European Society for the Study of Tourette Syndrome (of which he is Treasurer).
