

# Healthcare for Gender and Sexual Minorities: A Primer for DCNS Specialities

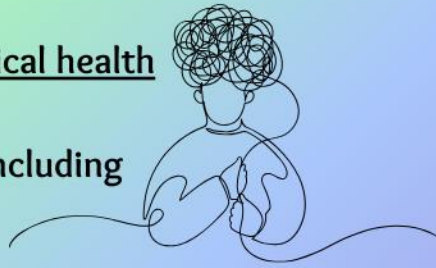

## Factors to consider during neurological care towards LGBT+ patients

- Interactions of other medications with gender-affirming hormone therapies (GAHT).
- Potentially higher risk of:
  - Brain tumors associated with GAHT
  - Stroke and stroke recurrence
  - Multiple Sclerosis

## LGBT+ patients facing discrimination of treatment can experience:

- Worsened psychological health
- Migraine disability
- Cognitive disorders including worsened memory

## Becoming a better physician towards LGBT+ patients

**Why should I care?**  
At the end of the day, we are ALL human beings.
