None

COURSE OBJECTIVES/LEARNING OUTCOMES
The learning objectives here are for students to gain an understanding of the links between cancer & aging, the experimental definition of the cell cycle, drivers and regulators of the cell cycle (including oncogenes & tumor suppressors, cyclins, CDKs, etc.). An overview of biological and replicative aging will include human biological lifespan potential, changes in life expectancy and rectangularization of the survival curve, experimental models used in aging research, forms of aging in mammals and the

"Hayflick model" of replicative senescence and the impact of telomerase expression on cellular aging. Students will need to keep up with assigned readings and select a recent paper in the areas of biological aging and/or cancer for presentation to the class, and will be responsible for preparing critiques of the presentations by class mates.

The University of Calgary values excellence in writing. Competence in writing entails skills in crafting logical, clear, coherent, non-redundant sentences, paragraphs and broader arguments, as well as skills with the mechanics of writing (grammar, spelling, punctuation). The University of Calgary offers a number of instructional services through the Students' Success Centre's Writing Support Services (<http://www.ucalgary.ca/writingsupport/>) for students seeking feedback on assignments or seeking to improve their general writing skills. Students are strongly encouraged to take advantage of these programs.
