

INTERPLAY.

IMPLEMENTATION OF
INTENSIVE THERAPY FOR
EARLY REACH THROUGH PLAY

December 2023 Updates

SURVEY PROGRESS

Our team spent early 2023 developing and piloting our survey, with three versions for different respondents.

Questions ask about barriers & facilitators to early intensive hand therapy for young children with cerebral palsy.

In summer 2023, our survey launched and 70 replies have been received:

- 49 Occupational therapists (OT)
- 12 Parents/caregivers
- 9 OT program managers/leaders

The survey will be open in early 2024, with the aim of collecting replies from each group from all provinces and territories.

Our progress in 2023 was a team effort. Thank you for everything you've contributed to the study!

We're still recruiting!
Take a picture to open the survey.

UPCOMING IN 2024

We will build on our progress to complete all study phases in 2024.

- Phase Two: March
- Phase Three: Spring & Summer
- Phase Four: Early Fall

After Phase Four, we will share strategies across Canada with the aim of increasing implementation of early intensive hand therapy.
