Preclerkship Coursework

The pre-clerkship program at the Cumming School of Medicine is comprised of the Population Health course followed by a series of sequential systems based courses and courses designed to integrate the knowledge and skills. The sequential systems based courses are evaluated using end of course multiple choice exams in addition to an ITER for the clinical correlation (bedside) components. There is a series of longitudinal based courses that include the Medical Skills Course, consisting of Communications, Physical Exam, Procedural Skills, Global Health, Ethics, Collaborative Practice, Professionalism and Physician Health. The skills and knowledge required for these courses are evaluated in an OSCE at the end of each pre-clerkship year. The Family Medicine Clinical Encounter is evaluated with the use of ITERs. Applied Evidence Based Medicine is evaluated using a combination of multiple choice knowledge exams, critical appraisal assignments and ITERs. The Career Exploration program includes career coaching as well as three clinical encounter weeks in various disciplines. This course is assessed through ITERs.

Clerkship Courses and Electives

The CSM clerkship runs from January to the following April, with 60 weeks of clinical instruction. Students complete mandatory rotations in Anesthesia, Emergency Medicine, Family Medicine, Internal Medicine, Obstetrics and Gynecology, Pediatrics, Psychiatry and Surgery. Students also complete 16 weeks of electives. Throughout clerkship, students complete the longitudinal 'Comprehensive Clinical Skills for Clerkship Course' (Course 8). Students are assessed with multiple performance indicators. Each mandatory rotation includes evaluations with both a content evaluation (multiple choice exam) and an In Training Evaluation Report (ITER) both of which must be completed successfully. Electives are evaluated with an ITER. Students must successfully complete a comprehensive clerkship OSCE.
