DIAGNOSTICS

## INSTRUCTIONS FOR APPLE

1. Open the Camera app on your iPhone, iPad, or iPod touch and select the rear facing camera.
2. Hold your device so that the QR code appears in the viewfinder in the Camera app. Your device recognizes the QR code and shows a notification.
3. Tap the notification to open the link associated with the QR code.

## INSTRUCTIONS FOR ANDROID

Newer models can scan QR Codes with their camera, while older ones need a QR Code app.

1. Open your Camera app and point it steadily for 2-3 seconds towards the QR Code you want to scan.
2. Whenever scanning is enabled, a notification will appear. If nothing happens, you may have to go to your settings app and enable QR Code scanning.

If QR Codes isn't an option in your settings, your device unfortunately can't scan QR Codes natively. This means you'll have to download a third-party QR Code reader app.
