Notice of call for Choosing Wisely Alberta Research Funding Proposals 2021

Choosing Wisely Alberta (CWA) is part of a larger Canadian movement (Choosing Wisely Canada) for reducing unnecessary tests and treatments in health care. Early next year, CWA will be funding important and innovative projects that further the goals of advancing care through promoting appropriate testing and clinical management.

The funding proposals must be grounded in one or more Choosing Wisely Canada recommendations (https://choosingwiselycanada.org/recommendations/).

All projects should intend to demonstrate a measurable impact on reducing low value care and/or improving patient outcomes, with a focus on patients within the community setting. Additionally, they must further the goal of advancing care by promoting appropriate testing and clinical management.

Priority areas of interest include projects that will:

- Identify and reduce unwarranted variation in areas of high resource utilization within Alberta.
- Reduce delivery of low value diagnostic imaging.

Three projects will be funded to a maximum of $75,000 each.

Further details will be forthcoming in December and applications will be due by:

February 28, 2021.
