How to order lab work on an operative encounter for non-surgical providers

- If a non-surgical provider wants to have lab work drawn while a patient of theirs is in the OR, it is important that the required lab work is ordered directly on the patient's surgical encounter as a signed and held order.
- Following the normal ambulatory workflow makes it difficult for SSSU to be aware that the lab work is needed or even to decipher what lab work is required.

Please follow these steps:

Open the patient chart and navigate to the Chart Review tab > Under the Encounter activity > click on their Surgery encounter > Open the encounter by clicking the encounter button
